

Curriculum - Reversion Overview

Administrators can create new versions of an existing curriculum, which is helpful when a curriculum needs changes and revisions as time goes on. To create a new version of a curriculum, click the Edit icon next to a curriculum on the Curricula Administration page. Small changes, such as changes to the curriculum name or description, do NOT trigger the creation of a new version. More substantive changes, however, such as changes to the curriculum structure, automatically trigger the creation of a new curriculum version.

- For information about curriculum **reversioning** options, [See Curriculum - Reversion - Reversion Options](#).
- For information about confirming a new curriculum version, [See Curriculum - Reversion - Confirm](#).
- For information about viewing previous curriculum versions, [See Curriculum - View Versions](#).

Curriculum Versioning - Course Catalog Settings

When a new version of a curriculum is created, the following Course Catalog settings from the previous version are also copied to the new version:

- Approval Workflows
- Badges
- Competencies
- Custom OU Pricing
- Enable Default Completion Message
- Evaluations
- Exclude from Course Recommendations
- Points
- Recommended courses
- Recurrence
- Required Electronic Signature
- Signature Message
- Skills
- Thumbnail Image
- Training Purpose
- Training Units

Important: Any Course Catalog settings not mentioned in the above list are NOT copied to the new version when a curriculum is versioned. The administrator will need to manually configure any Course Catalog fields not included in this list for the new version.

Curriculum Versioning - Child LO Upgrade Behavior

When a curriculum is reverted, users with the original curriculum version on their transcripts are always upgraded to the newest version of the curriculum, as well as the latest version of child LOs (learning objects) within the curriculum. This behavior applies to the following processes:

- Curriculum versioning
- Online course versioning which results in the auto-upgrade of a curriculum
- Material versioning which results in the auto-upgrade of a curriculum
- Learning Assignment Tool Reassignment

If a newer version of a child training item exists, users are upgraded to the latest version instead of retaining progress from the previous version, regardless of the training item's sequence
