Connect Overview

Created by Harris, Jeffrey, last modified on 12/06/2021

Connect is a social collaboration and learning tool. It's an informal social environment. Connect is an asynchronous learning experience driven by community and topic moderators, as well as community members. To create a new community, go to **UR Connect>UR Connect: Communities>New Community.**

When creating a community, the title and description will be visible by your community members. The banner and HTML widget are recommended, but not required. The community feed is automatically on. There are two types of memberships into a community. This includes invitation and auto-enrollment. If invitation is selected, users who are within the availability see a Join Community button. If auto-enrollment is selected, any user who falls under the availability would automatically be enrolled into the community. It's also possible to add two learning objects to the main page of the community. Images can be added to the main page as well for customization.

Once the community is created, the next step is to select the topics icon and create topics. When creating a new topic, the availability will default to what's set at the community level, but can be edited. Subtopics can also be created and follow the same rules.

Programs and cohorts provide a collaborative, online classroom-like, learning experience where learners can engage with one another and an instructor.

Program: a template used to create cohorts with shared defaults. All cohorts fall underneath a program.

Cohort: a combination of a connect community and a curriculum. Learners can complete training within a curriculum structure and collaborate with learners within the same Cohort. There are often multiple cohorts for each program.

There are Four Steps to build a Program and Cohort(s):

- 1. Permissions and Emails.
- 2. Create a Program.

To access Programs and Cohorts, just follow Learning Admin>Learning Management>Programs and Cohorts. Then, to create a new Program, click Create New Program.

e) Cohort Defaults: This section let's you set the default settings that populate when creating your cohorts and the settings can be adjusted at the individual cohort level.

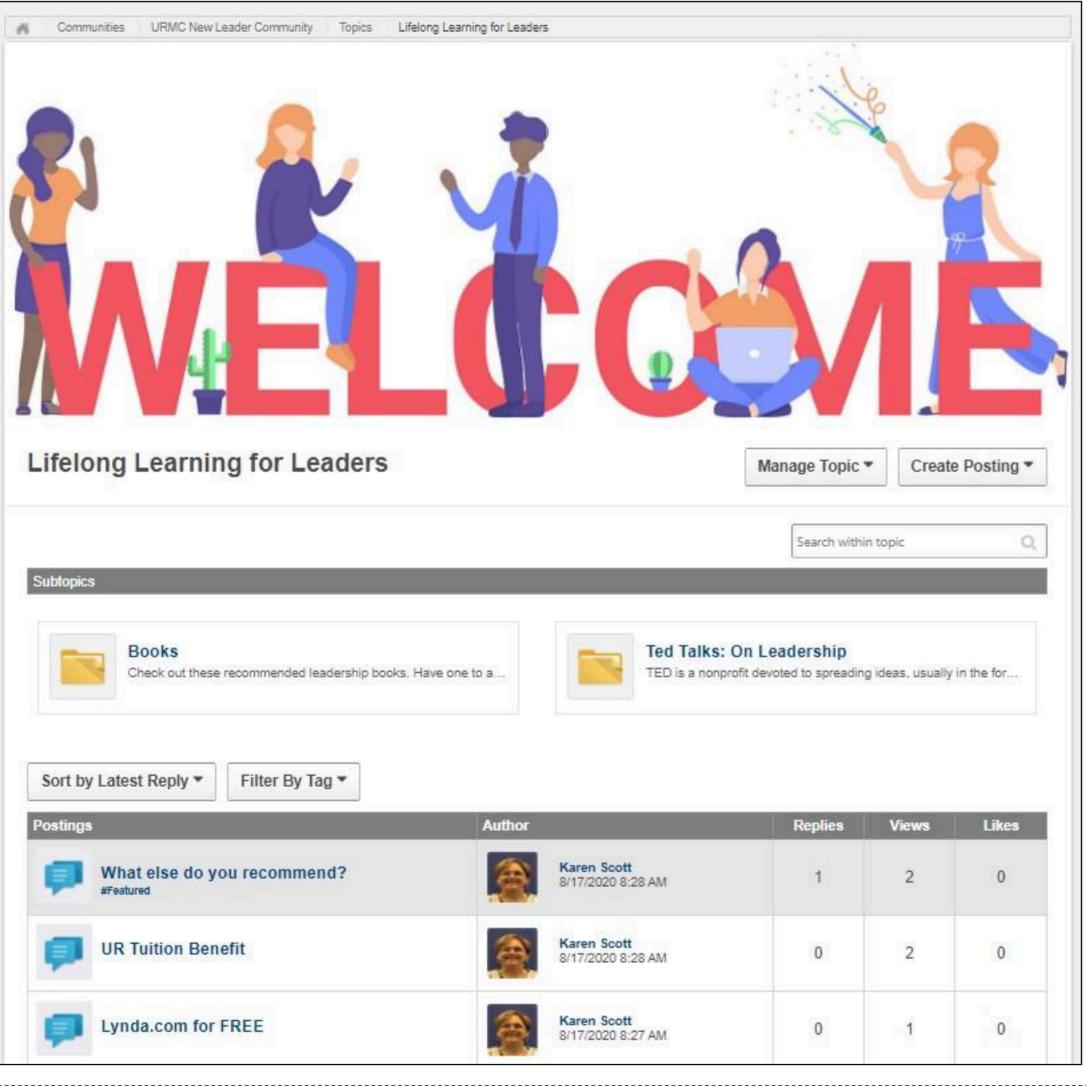

- a) **General**: This section includes the standard details for the program. All fields on this page are editable after creation of the program. Program Name, Vendor, Owner, and Subject are all required fields.
- b) **Availability**: This section allows you to select who has access to the program.

c) **Structure**: This section works similar to the way curriculums are created. d) **Community**: This section allows you to define the layout of the community that's associated with the program. You can choose an existing community template or create a new template. The template contains default content and is

needed for the Program. It includes the banner, HTML widget, topics, and postings.

You can also access the Community Templates page by going to **System Mgmt>Configuration Tools>Community Templates**.

- 3. Create a Cohort: To create a cohort, you'll need to be on the Manage Programs & Cohorts page. To begin, click Create New Cohort. Many of the details will prepopulate from the program. The General tab will require that you select start and end dates. The Availability, Structure, Community, and Cohort Details sections will copy over from the program. A cohort includes the Learning and Instructor tabs. The Learning tab gives users the ability to complete training and the Instructor
- tab allows Instructors to engage with their learners. Once a cohort is created, a community is created. 4. Assign Users: Users can be assigned to the cohort through a learning assignment by an administrator, assigned by their manager, or request the cohort through global search and learning search until the cohort's start time. Once registered, the cohort will display on the user's transcript. After the start date and time have passed, the option to launch will become available to users and selecting launch will take them right to the cohort community.

Current Communities

- Aide In-service Education Program HR Connect Community
- Pursuing Excellence in Clinical Learning Environments Rochester Improvement Science Education (RISE) Course
- URMC New Leader Community

- The cohort can be edited until the end date and time including the start and end date.
- Cohorts cannot be removed from transcripts.
- The cohort doesn't move to the completed transcript until all learning objects are completed and the end date has passed.
