Learner Home Configuration - Overview

🖨 ⤧ ✎ ⬅ ➡

The Learner Home serves as a learning hub which facilitates a seamless learning experience, allowing you to browse for and request relevant training, search and filter for specific training, and helps ensure compliance by helping you prioritize and take action on training you must complete. The Learner Home includes several features which enable learners to easily select subjects of interest, discover training based on machine learning, and quickly access and request new training.

It is recommended that learning administrators take action to prepare their portal to ensure the Learner Home performs optimally for users. Administrators can also customize various Learner Home features.
